KURUME AZALEAS

The Kurume Azaleas are one of the most showy of all flowers for the garden. They are also well adapted to forcing—thousands of them being sold for Easter, Mother's Day, and Decoration Day. They are comparatively easy to grow and make such a wonderful display that the demand is constantly increasing. Many of the varieties are hardy out-of-doors as far north as Long Island. They are extremely floriferous, and in season, the blossoms completely cover the plants. The colors are almost every hue and shade except yellow, as you will find below.

We will furnish one to five plants of a variety and size at each rate; five to 25 of a variety and size at the ten rate; 25 or more of a variety and size at the 100 rate.

If a variety is listed at 10 rate and not each rate there will be an additional charge of 15 cents per plant if less than 5 are ordered.

GABLE'S HARDIER AZALEAS

Mr. Joseph B. Gable of Pennsylvania has spent almost a lifetime working with Azaleas and Rhododendrons. Many years ago he started breeding azaleas with the hopes of producing a hardier type of evergreen azalea in a good color range than then available. He has had wonderful success and is now recognized as the leader in this field.

As to hardiness: these varieties will average hardier than Hinodegiri and Amoena and much hardier than the other Kurumes. All have lived and flowered in the open field where they have withstood temperatures of twenty below zero and more in the past few winters with only negligible injury to a few. Most of them were uninjured.

KAEMPFERI HYBRID AZALEAS

In these new Kaempferi Hybirds—the result of crossing Kaempferi and Malvatica—there has been obtained the hardiest type of evergreen Azalea, with a good range of form and color in the flowers so far achieved. Several years' tests have demonstrated that these new Hybrids are just as hardy as Kaempferi, until now the hardiest of the evergreen sorts. In connection with these Hybrids we suggest you try out the New Gable varieties.

SATSUKI HYBRID AZALEAS

We are not sure of the parentage or classification of these Azaleas. Mostly Japanese names and it is easy to misspell them by sound. Will appreciate it if you can help us make the corrections. Many of these varieties we only have a few of, some we have in hundred lots or more. We are still trying to get descriptions of the varieties we are not describing and hope to have it in a future issue. Besides the ones we are offering we have many others in small quantities we are still testing for hardiness and desirability.

A new group from the Chugai Nursery Co. near Osaka, Japan. These are late flowering. Flowers are usually variegated, white or pink ground with red, lilac or purple stripes, white base with colored margin, or purple with white variegation and edge. These need more and wider trial before we can recommend planting in exposed or colder sections.

BELTSVILLE AZALEAS

Here is a group of Azaleas originated at the Plant Industry Station of the U.S. Department of Agriculture at Beltsville, Md. These are mostly good greenhouse flowering varieties as well as being hardy in colder sections. The descriptions of the named varieties are from descriptions furnished by the U.S. Department of Agriculture.

U.S.D.A. AZALEAS

Some years ago the U.S. Dept. of Agriculture introduced a collection of Azaleas mostly from Japan. We have been growing these Azaleas many years and have selected the following varieties as the best ones in this collection. They are well worth trying.

BENI KIRISHIMA. Old rose, semi-double.

NEW U.S.D.A. AZALEAS

The Crops Research Division of the Agricultural Research Service, U. S. Department of Agriculture, hereby releases five azaleas. These varieties were developed by B. Y. Morrison and J. L. Creech at the U. S. Plant Introduction Station, Glenn Dale, Maryland, from a series of crosses made in 1947 and designed to incorporate some of the flower qualities of the Belgian-type azaleas into the hardy Glenn Dale hybrids.

After widespread trials of 96 selections, the azaleas being released at this time are considered to be the most promising for the azalea-growing areas of southeastern United States, from Washington, D. C., to Louisiana, and for forcing in all areas.

Their significant characteristic is in the pastel coloring of the flowers and the heavy texture of the petals. Occasionally the white selections are flecked and striped with red or purple, and some flowers show an irregular degree of doubleness. They flower in the Washington, D. C., area about May 8 to 15. These are suggested for further trial.

BAYOU (PI 279405). A spreading azalea with leaves narrow elliptic, slightly hairy, dark green. Flowers 2½" across, single but with occasional petaloid stamens, white with occasional scarlet flakes and stripes.

4 in. pot plants $1.25 $10.00

	Each	10	100	1000
GREEN MIST (PI 279406). A somewhat upright azalea with leaves glossy, narrow elliptic, glabrous. Flowers 2½" across, single, white with a distinct greenish blotch, heavy texture to the flowers. We have found this the hardier of this set.				
* 2 in. pot plants		$3.50	$25.00	
4 in. pot plants	$1.00	7.50	60.00	
* 4 yr. field beds XX trans.		6.00	50.00	
PINK ICE (PI 279408). A broad spreading azalea, with leaves dull green, large rather obovate, glabrous. Flowers 3" across, double, mallow purple with occasional purple flakes, smooth margins and crisp texture.				
4 in. pot plants	$1.00	$7.50		
WHITEHOUSE (PI 279409). A broad spreading azalea with leaves large, dull green, somewhat obovate, slightly hairy. Flowers 3¾" across, single, white with roundish petals with somewhat wavy margins and overlapping.				
4 in. pot plants	$1.25	$10.00		

VUYKIANA AZALEAS

A new race of large flowered Japanese Azaleas, produced by crossing hardy Azalea Malvatica hybrids with Azalea Mollis. Sturdy growers, prolific bloomers. From the information we have they are much hardier than the Kurume Azaleas. Flowers range from 2 to 2½ inches. All bloom late mid-season. Plants grow tall.

PALESTRINA. We are recommending this to use in place of Ledifolia Alba for a tall growing whitebloomer. Last season when Ledifolia Alba were both bud and bloom killed, Palestrina came through without any wood damage and plenty of white flowers. Try it for a hardier tall white.

FELDYK AZALEAS

From a famous grower in Holland. Introduced as "the Sweet Pea colored strain." They are crosses between Malvatica and Kaempferi and Japanese Azaleas. Have large bright colored flowers. Force easily, strong growers and very hardy. The blossoms exhibit all the delightful colors we most associate with Sweet Peas. One of the hardest evergreen types we grow.

JEANNE. Violet. 2 in. pot, 3 yr., 4 yr.

PSYCHE. Pure pink. 2 in. pot, 3 yr., 4 yr.

Azaleas will grow in full sun or in shade. In the sun you will have brighter colors and growth will be shorter. We prefer a little shade if convenient. The small pot-grown plants should be planted about ten or twelve inches apart in a prepared bed consisting of about equal parts of good acid soil and peat moss or rotten leaf-mold, with about one-half shade.

Azaleas like acid soil with plenty of peat moss or leaf-mold in it. As a fertilizer rotten cow manure, cotton-seed meal and tankage are good. Use this in early spring and keep well mulched with peat moss or leaf-mold and keep the plants well watered during dry weather.

For scale and red spider use Malathion.

If your soil is not acid enough we suggest you use Aluminum Sulphate or Sulphur.

Be sure to read page 1 carefuly before ordering.

Many items in this catalog will undoubtly be sold out before the season is over. We suggest you place your order as early as possible.

BACK ACRE AZALEAS

By Morrison

These azaleas are the first of the seedlings grown on personally, with a breeding program that is an extension of one phase of the original Glenn Dale work. They are **not** Glenn Dales, but are more closely related to the Satsuki group from Japan.

The breeding program centered and still centers on the production of double flowers that will be hardy for outside work, and in as wide a range of kinds that have white or nearly white centers and colored margins. The doubles are represented in this offering but only a few of those to come. The white or light centered kinds are a mere sample of the range to be available shortly.

These kinds are from parents that are perfectly cold hardy in Washington, D.C. and plants have been tested safely in that area, in Memphis, Tenn., and in the general Atlanta area. In extremely cold winters there was some loss of flower buds.

The usual variation in degree of doubling may be expected on newly set plants, and the variations in light centers will vary considerably until the plants are old enough to have many, small, blooming shoots.

Although they are all happy in the South, they are **not** bred primarily for southern gardens.

GLENN DALE AZALEAS

We began growing these Glenn Dale Azaleas in 1941. During the past few years, since they are becoming better known, the demand has increased rapidly. Most all the reports we get from the growers are very enthusiastic. They are doing well in some sections where the evergreen varieties were not supposed to grow.

Many who have seen our fields of these Glenn Dale Azaleas in bloom expressed their amazement and joy at their size, coloring and quantity of bloom. You folks who have been dealing with us for the past many years know we do not recommend a plant unless we really believe in it. We do suggest you try some of these Glenn Dale varieties if you can grow any of the other evergreen azaleas and while you may have some disappointments we feel sure you will be greatly pleased with their growth and beauty.

These one-like descriptions do not tell you much but we do have a special booklet that describes them much more fully. Sent on request—no charge.

Sometimes when Azalea flowers are described as striped or flaked on white they will appear as a solid color. When this occurs the branch should be cut out. This seems inherent with the variety—not any fault of the nurseryman.

We hope you will understand this system of indicating sizes as it saves a lot of space in catalog. We have been using this system for Crabapples several years and it seems to be working fine.

We will furnish one to five plants of a variety and size at each rate; five to 25 of a variety and size at the ten rate; 25 or more of a variety and size at the 100 rate.

CYTISUS BATTANDIERI

A splendid tall shrub, perfectly hardy. The olive-green shot silver leaves are like a Laburnum and the flowers are in cone shaped clusters, which in summer have a scent of ravishing sweetness reminding one of pineapple. The upstanding racemes of bright golden-yellow pea flowers are indeed a beauty to behold.

Our 3-year seedlings bloomed this past season and we are very favorably impressed with it. We have been selling all we can grow and only have the following to offer this season: 3 yr. field clumps $2.00 each.

DAVIDIA Involucrata (Dove Tree)				

Dr. Ernest H. Wilson describes the Dove Tree in his book "Aristocrats of the Garden" as follows: "The distinctive beauty of the Davidia is in two snow-white connate bracts which subtend the flower proper. They are always unequal in size—the larger six inches long by three inches broad, and the smaller three and one half inches by two and one half inches; they range up to eight inches by four inches and five inches by three inches. At first greenish, they become pure white as the flower matures, the flowers and their attendant bracts are pendulous on fairly long stalks, and when stirred by the slightest breeze they resemble large butterflies or small doves hovering amongst the trees and are so freely borne that the tree from a distance, looks as if flecked with snow."

We only have a few to offer this season 5 to 6 ft. at $12.50 each.

THE RARE FRANKLINIA

Each twig develops at its tip a cluster of buds of graduated size, like overgrown greenish pearls. Early in August the largest of these attain the size of marbles. Then the guard petal folds back, still retaining its firm spherical form. From this shelter emerges four other petals, satiny, snowy white, elaborately frilled and pleated. The snowy, frilly chalice, three inches in diameter, holds a sumptuous mass of orange-gold stamens and breathes forth a delicate, balmy fragrance.

Each flower lasts two or three days and then drops cleanly. **There is a constant succession of blooms till hard frost.** We frequently get the unusual effect of a tree clad in crimson, autumn foliage and abundantly starred with white flowers.

The Franklinia begins blooming when not more than 3 or 4 feet high. Young trees under favorable conditions increase in height a foot or more each season. Specimens 30 feet high are known. It develops naturally with several trunks, but may easily be trained to a single trunk by removing the sprouts which start from the base.

Franklinia prefers full sun, has proved entirely hardy about New York and hardy in favorable locations about Boston, Mass., and in Ohio.

We have found the Franklinia does much better if it has plenty of moisture at planting time. See color picture second cover page.

HOLLY (Ilex)

For many years we have been urging nurserymen to grow more holly. Fifteen years ago there was not very much demand for holly. If you will refer to our catalogs about that time and since, you will find we said, "The nurseryman who will grow a collection of Hollies to a specimen size will have something he can sell, whether times are good or whether they are bad. There is always a demand for them, and there will be as long as any other plants will sell."

During the summer months we are pleased for visitors to see our nurseries but during the digging season from September to July we **cannot** give callers the attention we would like. During the main digging season, if a customer takes the time of a foreman, it can mean that in his absence several helpers are idle and orders promised for the next few days cannot be handled. Therefore, we urge you to send your orders in to us several days in advance so we may have them ready for you.

LILAC

SYRINGA JAMES MACFARLANE (NEW)

Introduced by the University of New Hampshire, it is a hybird of Syringa reflexa and S. villosa, blooming from 10 days to 2 weeks later than Syringa vulgaris types. James MacFarlane is a true pink in the Lilac family and grows to a height of about 8 ft. Its large trusses and rich color make it spectacular and even small plants bloom freely. It is extremely hardy and adaptable, withstanding moisture conditions fatal to vulgaris hybrids.

* 2 yr. 18-24 in.	$1.00	8.50	75.00

SYRINGA MICROPHYLLA SUPERBA

A new variety of **Syringa microphylla** named **superba**, is said to flower again in early Fall, but primarily it is Spring-flowering. The flowers have the same fragrance as the Daphine, which gives it the popular name Daphne Lilac.

Syringa microphylla, itself, is distinctive for its very small leaves, less than an inch in length, and quite orbicular. The species is called Littleleaf Lilac. This is a small shrub, 4 to 5 feet in height. The plant is graceful, with slender stems. The flowers are in loose trusses, with main ones at the top of stems, and smaller ones along the branches. The entire plant in flower is like a huge bouquet, pleasing and novel. They bloom a little later than the popular hybrids, at the end of May, or in June, and are highly rated by the authorities. Red in the bud, they open soft pink, and bloom freely. This is a new hybrid, and not yet found in many nurseries.

SYRINGA VELUTINA KOMAR Miss Kim

Syringa velutina Komar 'Miss Kim'—A seedling selection made by University of New Hampshire, from seed collected at peak of Paik Un Dae, Pouk Han Mountains, north of Seoul, Korea in 1947. The original plant of 'Miss Kim' has maintained a height not exceeding 4½ ft. in New Hampshire. Flowering late, it escapes frost damage. Flowers lavender, fragrant. Fall foliage burgundy-red. Hardy to at least —25° F.

SYRINGA PALIBINIANA

This dwarf lilac from Korea must surely rank as one of the finest deciduous rock garden shrubs to come to us from the Far East.

Syringa palibiniana has much to commend it. Given a light, leafy soil with good drainage and a sunny position it will thrive and take many years to reach an ultimate height of about 3 ft. The sweetly-scented, pale mauve sprays are produced abundantly in late spring, and it makes an ideal shrub for pot cultivation in the alpine house.

In spite of such virtues, **S. palibiniana** is still a comparative rarity in gardens.

AUNT MARY'S SWEET CORN

The Sweet Corn Supreme

This is the most wonderful Sweet Corn we have ever grown. One grower describes it as "the best Sweet Corn in the world."

Has the most delicious flavor and keeps a long time before becoming too hard to use. In fact, usually requires artificial heat to cure it for seed purposes.

Aunt Mary's Corn, by its excellent quality, sweetness, and flavor makes a stronger appeal to the Corn-loving public than most any other variety and that appeal continues long after you are tired of other Sweet Corns.

Liberal size packets, 35c each; 3 for $1.00, postpaid.

$2.00 per pound, postpaid.

If after growing this wonderful Sweet Corn you are not entirely satisfied, we will refund every cent you paid us for it.

This nursery was started just 61 years ago by the present owner. We have made many mistakes but we believe our customers will agree that we have always tried to give a dollar in value for every dollar received. This will be our aim as long as The Tingle Nursery Co. stays in business. If you have any reason for complaint, tell us.

MALUS — FLOWERING CRABS

The Flowering Crabs are among the most charming of spring trees. They are not only beautiful when in blossom but many carry most ornamental and richly-colored fruit in the autumn. Most of the Crab family form graceful garden trees of medium size. They are quite hardy and require no particular cultivation, thriving best in a good loam and full sunshine.

We have larger trees of most of these varieties. Prices on receipt of your want list.

A FASCINATING HOBBY

Growing Azaleas is a hobby which provides an ever increasing source of interest. There are so many species to be had and so many almost breathtaking new hybrids being produced, that one is amazed at the magnificent display that we may have with only a small space of ground and a few of the newer plants that are now being offered. If you want a stimulating (and profitable) hobby that grows more interesting, beautiful and valuable every year, then grow azaleas.

EDCO IRON

For experimental use in the control of chlorosis (lack of chlorophyl) in azaleas, gardenias, roses, citrus crops, etc.

Results to date have shown Edco Iron to be very effective in correcting chlorosis in the above crops. Chlorosis may be caused by the excess or deficiency of several major or minor nutrient elements in the plant besides iron, and it may be caused by an excess of water or its lack, but Edco Iron commonly seems to help correct the effect if not the cause of these several conditions.

Full directions for using with each lot.

Prices: 1 lb. $2.30: 10 or more lbs. at $2.00 per lb.
